Introduction

There are many customers looking to migrate off of BAE/Silverskys hosted exchange platform. Migrating from this platform is fairly simple and upload speeds are far quicker than your typical exchange environment. This is a step-by-step guide for migrating to Office 365 using the tools from BitTitan

Planning Phase 1: Gather All the Necessary Credentials

1. Credentials Checklist
 - a. Office 365 Global Admin Credentials
 - b. Provisor Admin Credentials
 - c. BitTitan credentials
 - d. DNS Login Credentials

Note BitTitan comes with a tool called Deployment Pro which configures Outlook profiles after the migration. This can be pushed out either through GPO or email. If you are going to be pushing this out via GPO you will additionally need:

- e. Credentials to Remote to Primary DC (RDP, TeamViewer, LogMeIn, Splashtop, etc)
- f. Enterprise Admin Credentials for Primary DC

Planning Phase 2: Gather and audit all Users part of the Migration

1. Gather Users List in CSV format, Export from the Provisor
2. If using AD Connect with password sync users will have the same password as their on prem active directory. However, if not using AD Connect then you will need to get a list of passwords from BAE users or notify them of what their password will be in 365
3. Gather Distribution List with members of Distribution list in CSV format
4. Verify Organizational Units in Active Directory that will be a part of the GPO/AD Sync

5. Take note of any 3rd partner connectors for email filtering: Symantec, Barracuda, etc. Look up necessary steps for creating connectors in 365
6. Define MX Cutover Time (Typically recommend Friday Evening)

Prep Work Phase 1: Prepare Office 365

1. Create a net new office365 tenant, tenant will be spun up with the defaulted .onmicrosoft.com domain. This can be spun up direct with Microsoft or purchased through a CSP provider
2. Go to Office 365 Admin Center>Setup Domains>Add Domain
3. Verify Domain with TXT record provided to DNS provider
4. Select "I will manage DNS records myself" and checkmark the box "Skip this step" when it ask to place all the remaining DNS settings for you
5. Domain will say "possible service issues". This is fine. We will add the remaining DNS records after the MX cutover
6. Add Users: Manually, Bulk Upload with a Powershell Script, Bulk Upload with CSV, or with AD Connect

a. Powershell Script

#Connecting to Exchange Online Account#

```
$credential = Get-Credential

Import-Module MsOnline
Connect-MsolService -Credential $credential

$exchangeSession = New-PSSession -ConfigurationName Microsoft.Exchange -ConnectionUri
"https://outlook.office365.com/powershell-liveid/" -Credential $credential -Authentication
"Basic" -AllowRedirection
Import-PSSession $exchangeSession -DisableNameChecking
```

Create a CSV with the Following Headers:

- UserPrincipalName
- FirstName
- LastName
- DisplayName
- Password

#Bulk Import Users with Passwords#

#Bulk Import Users with Passwords#

```
Import-Csv -Path 'FilePath' | foreach {New-MsolUser -UserPrincipalName
$_.UserPrincipalName -FirstName $_.FirstName -LastName $_.LastName -DisplayName
$_.DisplayName -Password $_.Password -ForceChangePassword $False}
```

- b. AD Connect Using Custom Settings: <https://docs.microsoft.com/en-us/azure/active-directory/connect/active-directory-aadconnect-get-started-custom>

7. Apply Licenses to Users by going to Active Users>Bulk Select Users>Click Edit Product Licenses

The screenshot displays the 'Active users' section of the Microsoft 365 Admin Center. At the top, there are buttons for '+ Add a user', 'More', 'Views' (set to 'All users'), 'Search users', and 'Export'. Below these is a table of users with columns: 'Display name', 'Username', 'Status', and 'Sync Type'. Each row has a checkbox on the left for selection. On the right side, a 'Bulk actions' panel is open, showing '34 users selected'. The panel lists several actions: 'Add to group', 'Delete users', 'Edit contact information', 'Edit domains', 'Edit product licenses' (which is highlighted), 'Edit sign-in status', 'Edit user roles', and 'Reset passwords'. A 'Close' button is at the bottom of the panel.

8. Click Add to existing product licenses Assignments

10. Bulk Upload Distribution List (If applicable)

#Add Distribution Lists with Members#

```
Import-Csv -Path 'File Path.csv' | foreach {New-
Distributiongroup -Name $_.Name -PrimarySmtAddress $_.Address
}
```

```
Import-Csv 'File Path.csv' | foreach {Add-
DistributionGroupMember
-Identity $_.DL -Member $_.Alias}
```

Prep Work Phase 2: Prepare Source/Destination for BitTitan

1. Contact BAE support (supportdb@silversky.com) to set admin user with full impersonation rights for all accounts

“Hey Team,

Partner:

Customer:

BAE Product: (ex.BAE Systems 2010 Exchange 25GB)

I am performing a migration for this customer. In checking the admin user for BAE, I see that they do not have sufficient permission to impersonate the users mailboxes (This avoids us having to get creds for each user). We just need to run this powershell script for the admin user for this account:

Can you please run this command for the account:

Get-Mailbox -ResultSize Unlimited | Add-MailboxPermission -AccessRights FullAccess -User <admin user>

Please let me know if you have any additional questions.

2. If this is a smaller migration, you can also do this manually in the provisor for each user: To give the admin user full mailbox rights to each Users, double click on the User > Packages > Highlight Exchange > Edit > Click

"Launch Mailbox Rights Management" > add the cusrpt and give it Read and Full access

General Address
Telephones Organization Member Of Packages

3. Change Send/Receive size in office 365 to max of 150m: <https://help.bittitan.com/hc/en-us/articles/115008108047>

Note Make sure you are still connected to exchange online in powershell

#Change Send/Receive Size#

```
Get-Mailbox | Set-Mailbox -MaxReceiveSize 150MB -MaxSendSize 150MB
```

4. Set Impersonation on Office365. This will allow you to use admin creds to impersonate all mailboxes. With this in place you will not need creds for all individual users

#Setting Impersonation#

```
Set-ExecutionPolicy Unrestricted

$LiveCred = Get-Credential

$Session = New-PSSession -ConfigurationName Microsoft.Exchange -ConnectionUri
https://ps.outlook.com/powershell/ -Credential $LiveCred -Authentication Basic -
AllowRedirection

Import-PSSession $Session

Enable-OrganizationCustomization

New-ManagementRoleAssignment -Role "ApplicationImpersonation" -User admin@domain.com
```

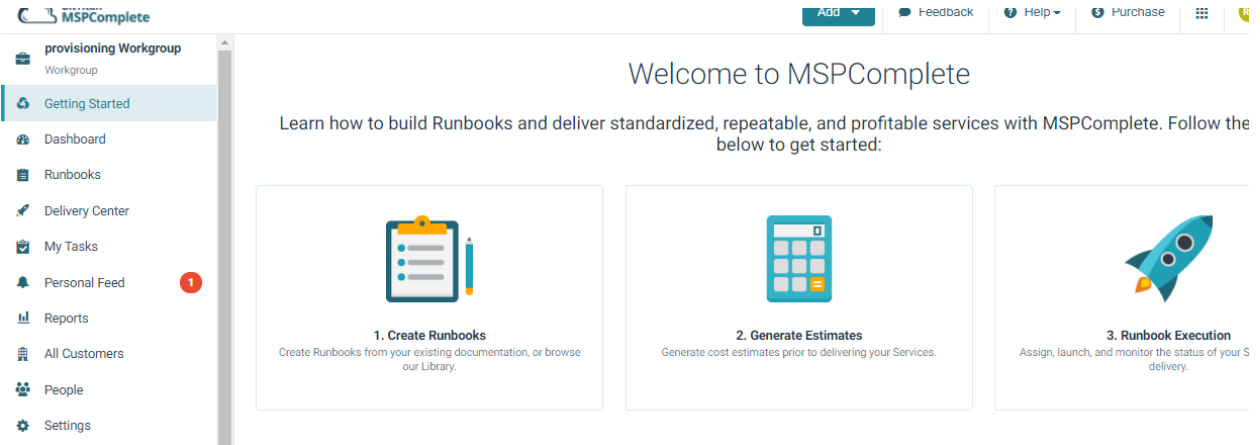

Prep Work Phase 3: Push out DMA agent

BitTitan comes with a deployment pro agent that automatically re-configures outlook profiles. This will bring over **autofill settings** and **signatures** for all users. There are two options to push this out:

- a. GPO
- b. Email

Note If we are deploying the agent via gpo, users will just receive a popup asking them to authenticate to reopen outlook after cutover. If we are pushing the agent out via email, users will receive a message in which they will have to click on a link to install the agent on their device

1. Login to the BitTitan Portal and Click All Customers on the left-hand column

2. Click Add Customer>Fill out Customer Name and primary Domain>Click Save

Add Customer

▼ Customers

Details

Company Name

Primary Location (Optional)
Select Country

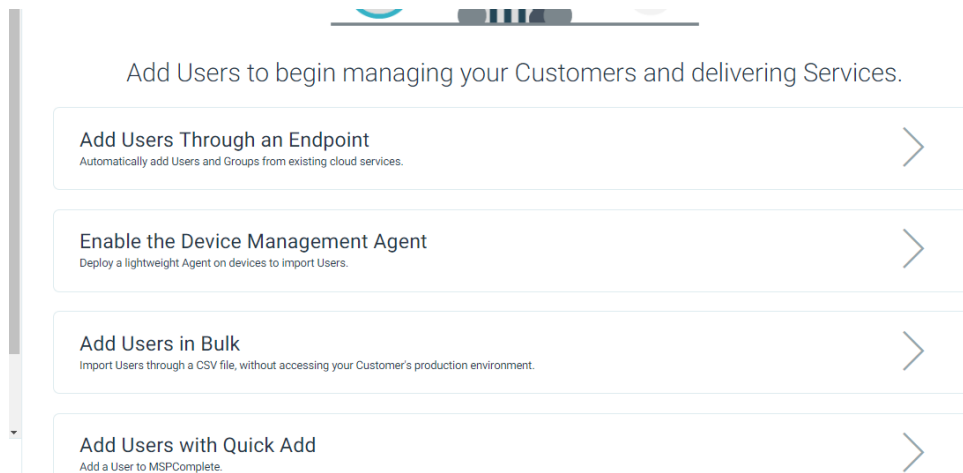

City (Optional)

Primary Industry (Optional)
Select Industry

Company Size (Optional)
Select Company Size

Follow Steps **3-15** if you are choosing to deploy the agent via **GPO**

3. Remote into Primary DC
4. Open Browser and Login to BiTitan.com
5. Go to All Customers>View Users on the Customer you created
6. Click “Enable the Device Management Agent”

7. Follow the steps from the following KB Article which walks you through setting up a new share, placing the exe in the share, creating the gpo, and scheduling it to run: <https://help.bittitan.com/hc/en-us/articles/115008110847>

Add Users with a Device Management Agent

 By using the Device Management Agent, you agree to comply with BitTitan's User Agreement.

▼ Device Management

Instructions

Installing with a Group Policy Object (GPO).

1. Save the Device Management Agent setup file (i.e., BitTitanDMASetup_60577C0A954BA572_.exe) to a network share folder.
The folder needs to be accessible for all Users on the network.
2. Create a GPO that executes the DMA setup file on an Active Directory Organizational Unit's computers with an immediate scheduled task.

Script Parameters: Copy to Clipboard
 \\path-to-
 BitTitanDMASetup_60577C0A954BA572_.exe\BitTitanDMASetup_60577C0A954BA572_.exe

8. Monitor users that successfully have the agent installed by going to Customers>Select customers>Manage>Device Management>Deployment pro

You will need to put in the destination domain and add the 365 endpoint

DeploymentPro
Cancel
Save and Continue

What is DeploymentPro, and how does it work?

DeploymentPro is a cloud-based solution that remotely configures and manages Users' Outlook profiles.

- To start using DeploymentPro, launch the Device Management Agent.
- Once installed on Users' devices, set up the module to automate the configuration of all Users' Outlook profiles.

 Launch DeploymentPro for UserActivation to View Legacy Projects

<div><div><div></div></div><div>admin@upm.gov.sg</div></div>	admin@upm.gov.sg	Scheduled on Apr 30, 2018 9:15am	<div>0</div> <div>0</div> <div>1</div>

13.If the status does not say "running" but remains in "scheduled" reschedule again until it moves into a **running status**

14.If users are not being picked up with the GPO, troubleshoot with the one remote emote user:

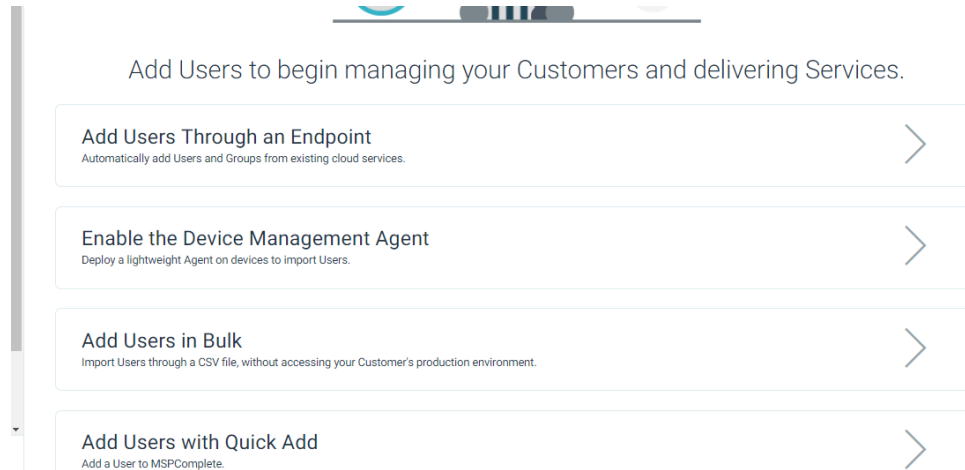

- Run Gpresult on their computer to see if the GPO is running
- If the GPO is running, try running the exe manually to see if it is blocked but a firewall setting
- If it is blocked then create an exception to the firewall to allow the exe to run.
- If it is not being blocked check to see if there are any web proxy settings that may be blocking communication back to bittitan

15. *This completes the steps for setting up DMA via GPO. If you have completed this successfully then move on to the next section. If you are deploying the agent via email, follow steps 16-26.

Deploying DMA via EMAIL

16. In the BitTitan portal, go to All Customers and select the customer you created

17. Click Add Users Through An Endpoint

The screenshot shows a web interface for adding users. At the top, there is a header with the text "Add Users to begin managing your Customers and delivering Services." Below this, there are four rectangular buttons, each with a title, a description, and a right-pointing chevron icon. The buttons are: "Add Users Through an Endpoint" (description: "Automatically add Users and Groups from existing cloud services."), "Enable the Device Management Agent" (description: "Deploy a lightweight Agent on devices to import Users."), "Add Users in Bulk" (description: "Import Users through a CSV file, without accessing your Customer's production environment."), and "Add Users with Quick Add" (description: "Add a User to MSPComplete.").

7. Add items to your project. If you already added users to the MSP complete portal either through GPO or an endpoint. You can select "Add from MSP Complete". If you have not yet, then you can select Autodiscover items to import users to the portal

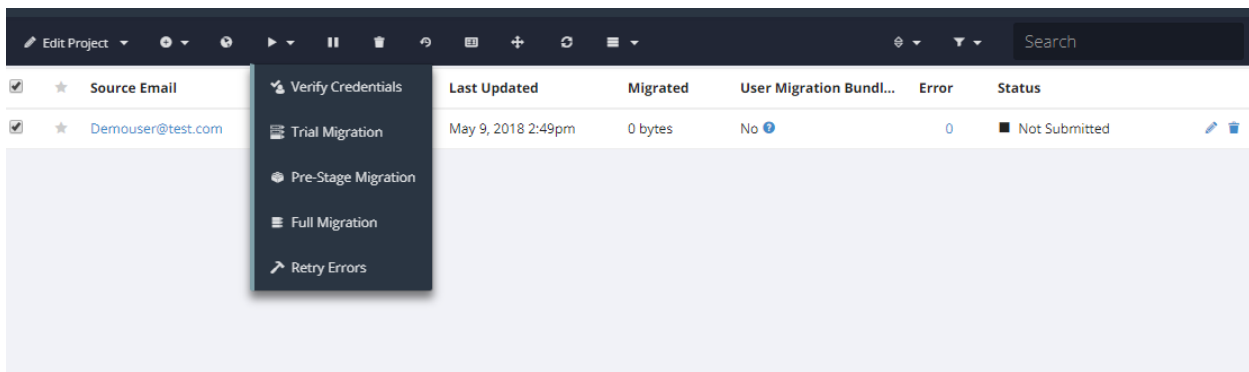

Add items to your Project.

Click the "Add" menu in the toolbar, and select an option for adding items.

- Add From MSPComplete**
Add Users from an existing Customer.
- Quick Add**
Add one item at a time.
- Bulk Add**
Use our online spreadsheet, or a file of your own, to add items.
- Autodiscover Items**
Use MigrationWiz to automatically discover all of your items.

8. Audit User names and Domains on both the Source and Destination (Make sure they match BAE and 365), Cleanup user list.

9. Select All Users>Verify Credentials

Source Email	Last Updated	Migrated	User Migration Bundl...	Error	Status
Demouser@test.com	May 9, 2018 2:49pm	0 bytes	No	0	Not Submitted

10. There are numerous errors that could appear here. Most of the steps I made for prep work will make it so that you avoid most of these errors. Refer to BitTitans KB articles for most common errors and how to troubleshoot. <https://help.bittitan.com/hc/en-us/sections/115003465187-Mailbox-Error-Lookup?page=2>

Unsuccessful verification will show a “Failed” Message

Edit Project							
	Source Email	Destination Email	Last Updated	Migrated	User Migration Bundl...	Error	Status

MIGRATION ERRORS

⚠ Your migration failed checking source credentials. Office 365 user names should always be specified as email addresses. Ensure user names are specified as email addresses.

Source Server: 8 minutes ago

[Learn More](#)

Click on “Learn More” to access BitTitan’s Relevant kb articles specific to the error:

❓ OFFICE 365 USER NAMES SHOULD ALWAYS BE SPECIFIED AS EMAIL ADDRESSES

[Open In New Window](#)

Office 365 user names should always be specified as email addresses: This error indicates that the specified Office 365 user name is invalid. Office 365 requires users to log in with an email address, not a user name as in "John Doe" or "domain\johndoe".

Resolution:

We recommend the following:

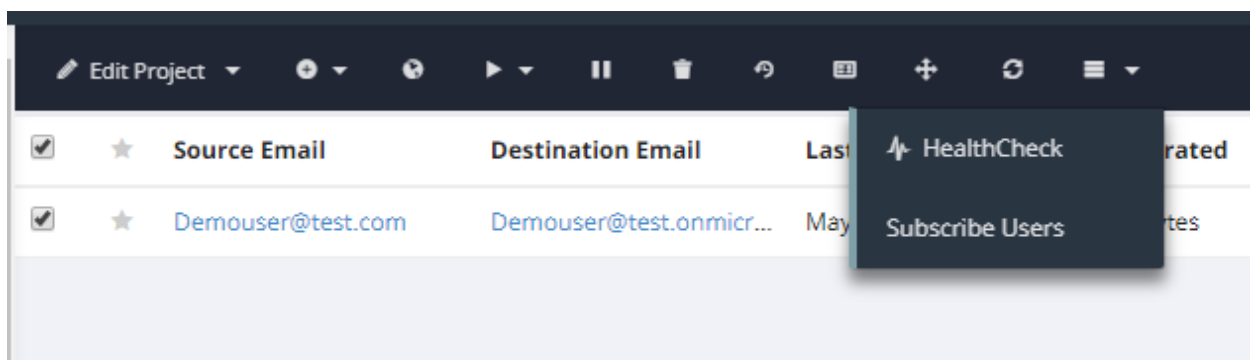

1. If using administrative credentials for Office 365, check the admin user name specified on your project.
2. If not using administrative credentials for Office 365, check the mailbox owner user name specified on the mailbox.
3. In all cases, make sure the user name work when logging in at <https://login.microsoftonline.com>.

11. After all users have successfully completed verification, Select All users>Click on the Hamburger icon at the top of the toolbar> Click Subscribe Users

12. This will bring you back to the MSP complete portal. Select all users>Click Apply User Migration Bundle

1 Users

1 Selected

Apply User Migration Bundle License

Delete Users

Enable Device Management Through Email

<div></div>	Primary Email Address	User Principal Name	First Name	Last Name	DMA Status	
<div><input checked="" type="checkbox"/></div>	Demouser@test.com	Demouser@test.com	Demo	User	<div><div></div></div>	

13. This takes a couple of minutes to propagate but after, in the migrationwiz portal the “User Migration Bundle” column will change from “No” to “Yes”

User Migration Bundl...

Yes

Migration Phase 1

1. Preferably start at beginning of the week, plan for MX Cutover on Friday evening
2. Select All Users>Click on the start button>Pre-stage Pass

<input checked="" type="checkbox"/>	Source Email	Verify Credentials	Last Updated	Migrated	User Migration Bundl...
<input checked="" type="checkbox"/>	Demouser@test.com	<ul style="list-style-type: none"> Trial Migration Pre-Stage Migration Full Migration Retry Errors 	May 9, 2018 2:53pm	0 bytes	Yes

3. Select a time range from the dropdown of prior to 90 days>Start Migration

▶ Start Pre-Stage Migration

Migrate older items, in preparation of a later final switch to your new system. Older items are migrated because they do not change, but typically represent the majority of the data. Use this type of migration before MX record cutover. Fill the mailbox with older email; this reduces the amount of data to migrate after cutover.

1 Items Selected

4. This will give you a status bar and show the amount of data moved over in the “bytes” column. If any users fail, it’s usually do to server timeout. Simply rerun the pre-stage pass on these users to restart where it left off. If you click on any user’s name, you can see metrics like upload speeds:

MIGRATION HISTORY		DURATION AND SPEED	
Verify Credentials	✓ Success a few seconds	Statistic	Source Destination
Start: May 9, 2018 2:51pm End: May 9, 2018 2:52pm		Active Duration	6 minutes a few seconds
Full Migration	✓ Success 3 minutes	Passive Duration	Less than a second 6 minutes
Start: May 8, 2018 6:51am End: May 9, 2018 2:55am		Data Speed	3 MB/hr 146 MB/hr
Full Migration	✓ Success 2 minutes	Item Speed	97 items/hr 5,597 items/hr
Start: May 7, 2018 8:11pm End: May 7, 2018 8:13pm		Performance Analysis	
Full Migration	✓ Success 2 minutes		

5. Once the pre-stage migration has run for all users and is in a "Completed" Status

			May 8, 2018 6:53am	441.16 MB	No	0	✓ Completed	
			May 8, 2018 6:53am	506.66 MB	No	0	✓ Completed	
			May 8, 2018 6:53am	6.09 GB	No	23	✓ Completed	
			May 8, 2018 6:52am	29.49 MB	No	0	✓ Completed	
			May 8, 2018 6:57am	25.17 GB	No	31	✓ Completed	

6. Next we are going to perform a full migration to bring over copies of remaining mail plus calendars, contacts, notes, journals, rules. Select All users>Click on the start button>Full Migration

The screenshot shows the T-Minus 365 interface. At the top, there is a dark navigation bar with icons for 'Edit Project', adding/removing users, play/pause, trash, undo, redo, and a menu icon. Below this is a table with columns: 'Source Email', 'Last Updated', 'Migrated', and 'User Migration Bundl...'. The first row shows 'Demouser@test.com'. A context menu is open over this row, displaying the following options: 'Verify Credentials', 'Trial Migration', 'Pre-Stage Migration', 'Full Migration', and 'Retry Errors'. The 'Full Migration' option is highlighted.

7. You can schedule this to start at a specific time if you would like:

▶ Start Full Migration

What is a Full Migration? ?

Use this type of migration for Big Bang (Single-Pass) Migrations, or for following an earlier Pre-Stage Migration. Use this after MX record cutover to make sure you are not missing any data.

8. Confirm all users go into a "Completed" Status

Migration Phase 2: MX Cutover/Delta Pass

1. At Designated time, login to DNS provider and change you MX records to point to Office365
 - a. You can find this in the 365 Admin Center by going to Setup>Domains
 - b. Office365 MX record follow this format **Domain-com.mail.protection.outlook.com**
2. Run another Full Pass. This will perform a **delta sync** to pull over any residual data that may have been missed.

Migration Phase 3: Post Migration Cleanup

1. Audit Destination Environment Mailflow for Inbound/Outbound Mail
2. Login to BitTitan>Go to All customers>Select customer>Manage>Device Management>Deployment Pro
3. Make sure DMA status has moved into "Completed" status. If in "error" status it means the users failed authentication 3x. Reschedule the tool to run at the next time interval available

Customers > CEI > Device Management > DeploymentPro

DeploymentPro

Settings

Use BitTitan PowerShell to schedule DeploymentPro for a large number of mailboxes. [Read more.](#)
